	Annex G	Tables G.1, G.2, G.3	Technical	In tables G.1, G.2 and G.3 correction factors are provided with a frequency resolution of 5 MHz. Since the model used to determine these factors is not provided in the standard it is not evident if correction factors for frequencies not listed can be obtained by interpolation. Hence, guidance should be provided how correction factors can be obtained for frequencies that are not listed in the table (within the frequency range 30 MHz to 200 MHz).	none	Recommendation: In tables G.1, G.2 and G.3, use linear interpolation for data needed that are between the ones provided (within the frequency range 30 MHz to 200 MHz).
